

# Smart Jewelry Center

Location: Saudi Arabia

### Control Demands

State-of-art security system providing flexibility in real-time monitoring with surveillance, access control, door locks, and the ability to control systems remotely while also being expandable for A/V needs.

### Added Control Results

Access control logs and real-time surveillance video are available both locally and remotely. Integration with the VoIP phone system and inclusion of in-wall Touchscreens increases accessibility and control.

### Application Spotlight

HAI's controller replaces a conventional security system and adds a lot of functionality and flexibility without a big difference in price. It was the ultimate choice for the customer who received quotations for conventional security systems. The HAI Omnitouch 5.7e added the element

of luxury to the system, which is an aligned representation of the jewelry center. It also acted as an interface to the integrated voice over IP door phone system. The center is monitored and controlled from applications on iPads, iPhones, and the Internet. And finally, management has 24-hour real-time monitoring and control.

### Installed Products

Products	
20A00-2 Omni Pro II Controller	78A00-2 Access Control Key Tag Pack of 10
