

Three-Story Nightclub

Location: Dallas, Texas USA

Control Demands

Provide the ability to secure three different areas with one alarm, have them operate as one system, and control all three via an iPhone.

Added Control Results

The use of HAI products enabled the client to restrict access to each area of the business with user codes as well as remote system management of business operations and monitoring opening and closing of the building.

Application Spotlight

The owner of a nightclub in downtown Dallas was looking for total control over his business, even remotely. This business is divided into three different areas: a nightclub, a tattoo parlor, and an art gallery. HAI was able to meet the owner's needs with a line of award-winning products. The Omni Commercial Controller provides security to the entire business with a central system. Snap-Link Mobile enables control of all areas of the

business. With Snap-Link Mobile for iPhone, the owner can supervise and adjust all system settings remotely as well as monitor exactly what events are taking place in the business. With user codes in place, the client can easily restrict access to each area of the building. Phase two of this project includes the ability to manage all thermostats and exterior lighting in addition to controlling access to specific rooms.
