Control Demands

Business security and control of specific video entertainment screens for guests throughout all areas of the establishment. Simple interfacing and adjustment of televisions by employees.

Added Control Results

Installation of an HAI Omni Commercial Controller-based system for integration of safety and security with special emphasis on control of televisions individually or as groups with the added benefit of energy management through shutdown of televisions when not in use.

Application Spotlight

The business is controlled as two separate areas each with TVs used to show sporting events. HTX2 devices are used to control 16 TVs and six DirecTV receivers. From the interface home employees control the TVs by choosing “restaurant” or “bar.” When “restaurant” is chosen you are presented a layout of the wait staff table arrangement layout. From here you choose the TV you would like to control. Each TV is pictured with a small color bar beside it. This indicates which group of TVs it belongs to. Any other TV sharing a color will change channels

at the same time. A small power button is also pictured next to each TV. Powering off screens helps reduce energy use for when seating areas are not in use. TVs can be turned on and off one at a time or all at once—a nice feature for those opening or closing the business. Selecting a TV opens a “remote control” page. Every button on this page functions just like the TV’s physical remote. The 17 surrounding buttons, each with a specific sports channel shortcut, allow the user to jump to preset favorites.
